

Insight Extraction Team 16

Sathwika Rupireddy & Amna Zubair

Validation Methodology

- ✓ Looker Studio dashboard metrics were validated against backend SQL queries
 - ✓ SQL queries were executed on cleaned Applicant, Outreach, SEVIS, and Deposit datasets
 - ✓ Each dashboard metric was matched to an existing SQL aggregation
 - ✓ Results were compared to confirm consistency or identify discrepancies
-

Data Sources

- ✓ Applicant dataset (application details, intake, source, decision)
 - ✓ Outreach dataset (student status, visa progression, appointments)
 - ✓ SEVIS dataset (visa-related identifiers and status)
 - ✓ Deposit dataset (deposit confirmation and progression)
-

Key Metrics Validated

- ✓ Total number of applicants
 - ✓ Applicants by intake term
 - ✓ Applicants by application source
 - ✓ Student status and visa outcomes
 - ✓ Program-level outreach and conversion pipeline
-

✔ Metric Validation: Total Applicants

- ✔ Dashboard KPI shows 1,565 total applicants
 - ✔ SQL COUNT(+) on applicant table confirms the same total
 - ✔ No discrepancies observed
-

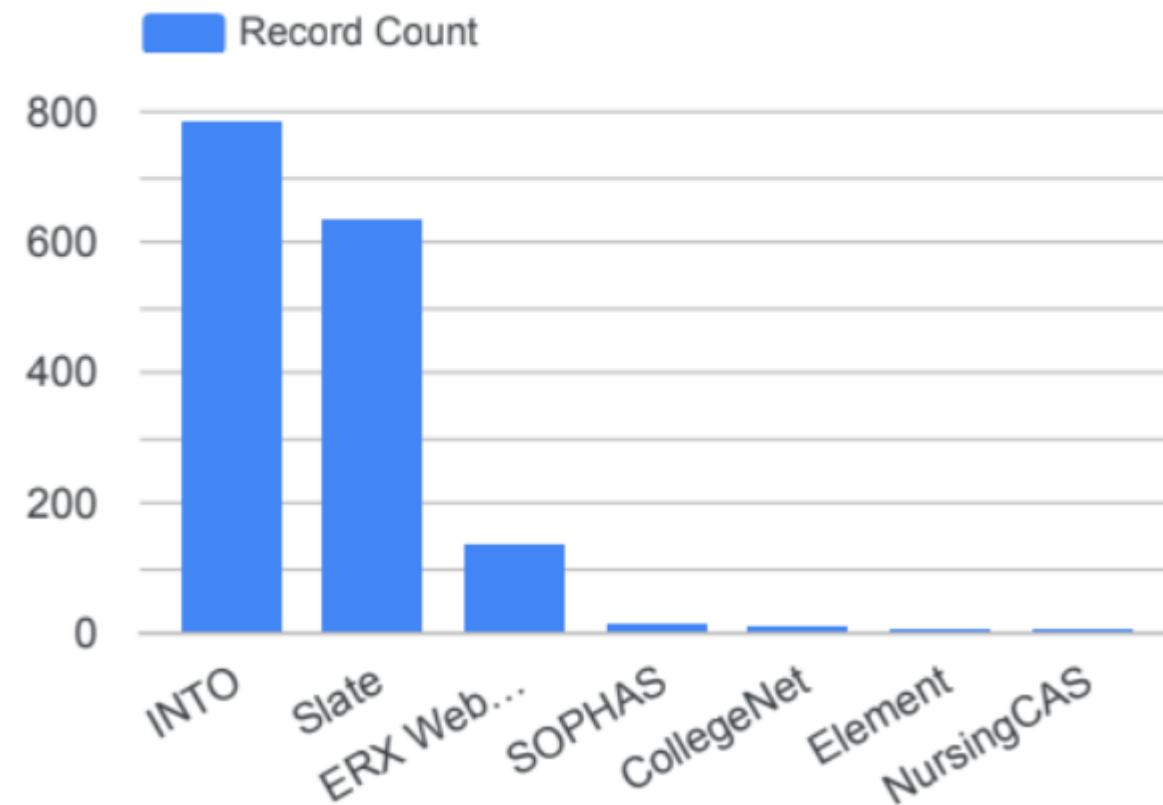

Total Applicants

1,565

✓ Metric Validation: Application Source

- ✓ INTO and Slate are the largest applicant sources
- ✓ SQL aggregation by application_source confirms ranking and volume
- ✓ Dashboard bars align with SQL results

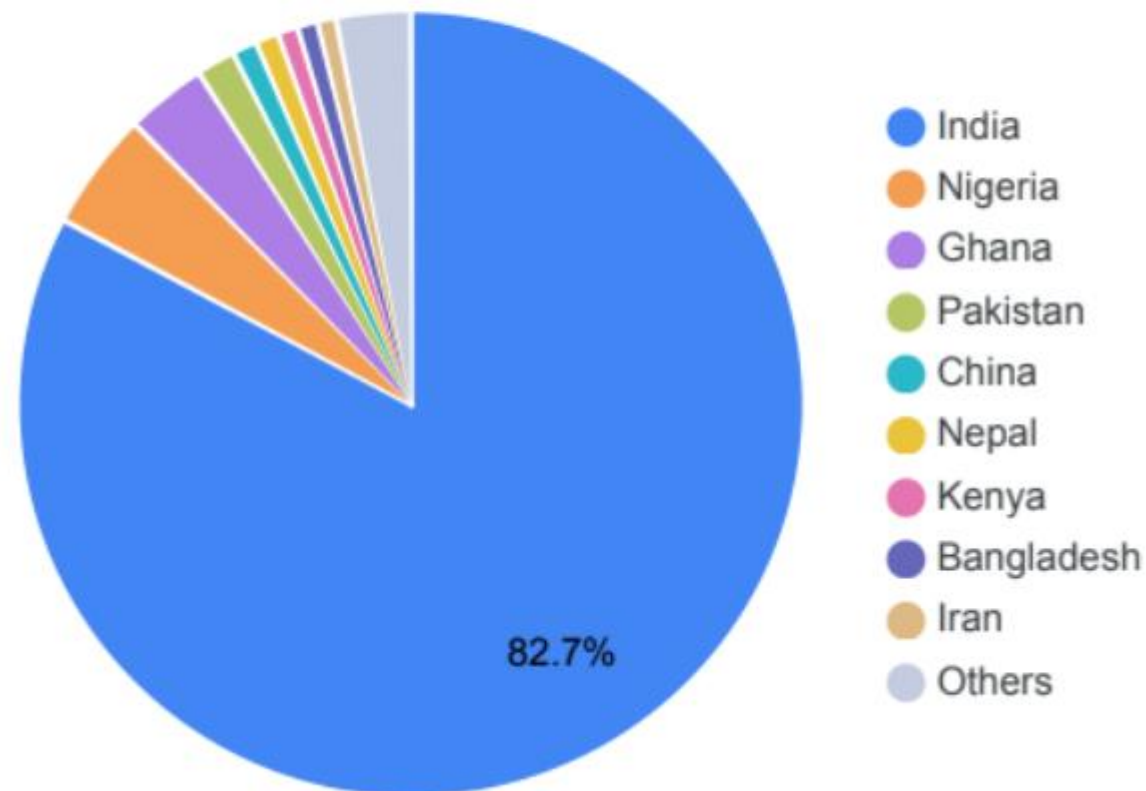

Application_Source

✓ Metric Validation: Student Status

- ✓ Majority of records are in "Outreach efforts" stage
- ✓ Followed by Visa Approved, Appointment Scheduled, and Visa Denied
- ✓ SQL grouping by `student_status` validates dashboard proportions

Applicants by Country

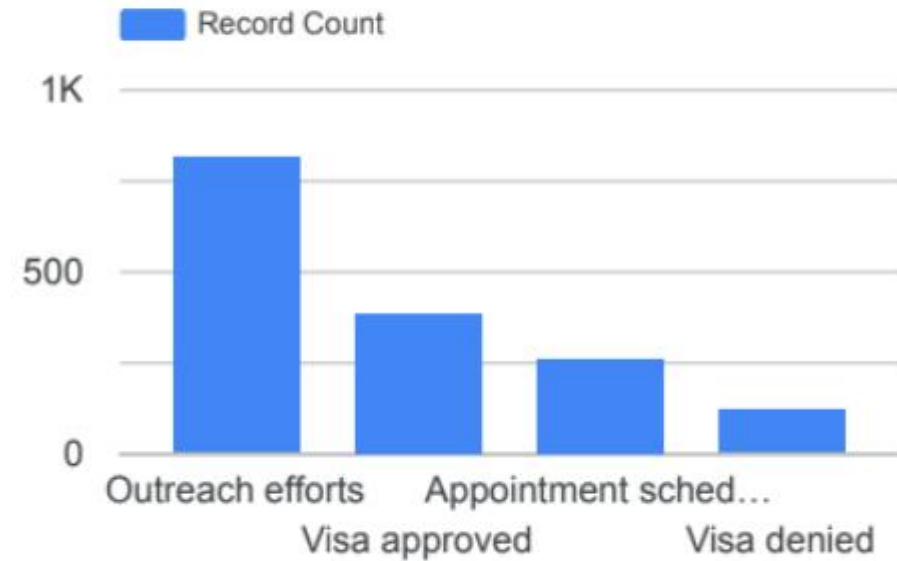

Program Pipeline Validation

- ✓ Programs show different conversion patterns
- ✓ SQL confirms variation in acceptance, deposit, and visa approval
- ✓ Dashboard accurately reflects pipeline progression by program

Outreach Status Breakdown

Data Considerations

- ✓ No major discrepancies between SQL and dashboard metrics
 - ✓ Minor rounding differences due to visualization formatting
 - ✓ Deposit table allows duplicates, but SQL logic prevents inflation
 - ✓ SEVIS IDs not expected for all early-stage applicants
-

Final Insights

- ✓ Applicant volume is highly concentrated by country and source
- ✓ Large portion of applicants remain in early outreach stages
- ✓ Opportunity exists to improve conversion from outreach to visa approval
- ✓ Program-level trends can guide targeted recruitment strategies

Conclusion

- ✓ Dashboard metrics are fully supported by validated SQL queries
 - ✓ Data consistency confirms dashboard reliability
 - ✓ Stakeholders can confidently use insights for decision-making
-
